## 非晶、纳米晶共模、差模电感铁芯

Amorphous microlite, nano-microlite common mode, differential mode induction iron core

## 共模电感铁芯

Common mode induction iron core

## 性能特点:

采用纳米晶制作，具有高饱和磁感应强度、高磁导率、高电感量、低损耗、体积小、重量轻、频率特性优良，特别适合电磁抗干扰（过EMI使用）。

## The performance characteristics:

It is made by nano-microlite, has high saturated magnetic induction density, high permeability, high inductance parameters, high loss, small volume, low weight and excellent frequency characteristics, and is especially suitable for electromagnetism anti-jamming (EMI use)

## 铁芯规格及性能:

The specifications and performances of iron cores:

HX-NC	Φ16/26×10	>80
HX-NC	Φ20/30×10	>40
HX-NC	Φ25/40×15	>60

## 差模电感铁芯:

Differential mode induction iron core:

## 性能特点:

采用非晶合金制作，具有优良的恒电感特性和抗叠加直流偏磁能力，损耗低，用于各种电感。（采用开口和无气隙铁芯）

## Performance characteristics:

It is made by amorphous microlite alloy, has excellent constant induction characteristic and anti-superposition DC magnetic biasing capability, and low loss, and is suitable for various inductions. (Adopt opening and no-gap iron core)
